

ECO-FRIENDLY
**SUPAPA DE SIGURANTA
SAFETY SHUT-OFF VALVE
CS**

SUITABLE FOR UP TO 30% H₂ FEED INTO THE GAS NETWORK

Generalitatii

Supapa de siguranta **CITYSTOP CS** este un dispozitiv de siguranta (**EN 14382**) pentru instalatii de reglare presiune de gaz conform **EN 12186 si EN 12279**.

Beneficii

- gama larga de setare pentru declansarea superioara si inferioara
- Timp de inchidere < 1secunda
- conectari cu flanse variabile
- proiectat si examinat confrom DVGW
- constructie usor de intretinut

Aparatul se poate utiliza pentru gaz natural si alte gaze neagresive. La solicitare se poate furniza optional si cu constructie pentru gaz acru.

Seria aparaturii este disponibil pentru urmatoarele trepte de presiuni nominale:

PN 16 / ANSI 150,
PN 40 / ANSI 300,
PN 100 / ANSI 600.

Sunt doua tipuri pentru diferite presiuni: presiune de iesire pana la 16 bar (schema 1.) peste 16 bar (schema 2.)

Am dezvoltat supapa de siguranta **CITYSTOP CS** special pentru utilizare in alimentarea cu gaz a consumatorilor comunali si industriali.

Proiectarea si dimensionarea supapei de siguranta s-a facut in conformitate cu Directiva Echipamentelor de Presiune **PED 2014/68/EU** si cu standardul **EN14382**. Ca standard produsul are Declaratie de Conformatitate EC si maraj CE.

Supapa de siguranta **CITYSTOP CS** este o alegere optima si pentru utilizare inaintea arzatoarelor cu gaz.

Fata de alte produse, are beneficiul variatiilor mari de conectare, inclusiv alegerea preferentiala a flanselor de intrare si iesire. Seria **CITYSTOP CS** Este caracterizata prin utilizare usoara, constructie service usor si dimensiuni mici.

Supapa de siguranta poate fi folosita in caz de suprapresiune si in caz de lipsa presiune. Membrana este echipata cu un brat de reglare manual, atasabil, utilizat pentru redeschidere si cu un deblocator simplu, manual cu buton. Optional este posibilitatea echiparii cu intrerupator limita si un deblocator electric actionat de la distanta(cu ajutorul unei valve magnetice incorporate)

General

The **CITYSTOP CS** is a safety shut-off valve (**EN 14382**) for gas pressure regulating stations as defined in **EN 12186 and EN 12279**.

Benefits

- Large range for setting upper and lower trip
- Closes in less than 1 second
- Variable flange connections
- Designed and tested in accordance with DVGW
- Easy to maintain

The valve can be used with natural gas and other non-aggressive gases. Optionally, a design suitable for acid gas may be supplied.

The series is designed to accommodate the following nominal pressure stages:

PN 16 / ANSI 150,
PN 40 / ANSI 300,
PN 100 / ANSI 600.

Two designs are available to cover different response pressures: for downstream pressures \leq 16 bar (Fig. 1) and $>$ 16 bar (Fig. 2).

The safety shut-off valve **CITYSTOP CS** has been developed specifically for use in municipal and industrial gas supply systems.

The safety shut-off valve is designed and dimensioned in accordance with the Pressure Equipment Directive **PED 2014/68/EU** and the standard **EN 14382**. An EC declaration of conformity is provided as a standard.

Its structure makes the safety shut-off valve **CITYSTOP CS** ideal for use in gas burners.

Multiple connection options, including versions with different intake and outlet flanges, provide the design with an edge over its competitors. Simple operation, service-friendliness and small dimensions are further advantages of the **CITYSTOP CS** series.

The device is suitable for excess pressure as well as insufficient pressure. The valve is provided with a manual clip-on lever for re-opening and a simple pushbutton-operated manual trip. Limit switches to acknowledge tripping and an electric remote trip (by an add-on solenoid valve) are available optionally.

Constructie si functionare

Supapa de siguranta **CITYSTOP CS** consta din doua unitati: din dispozitivul de baza cu conectarea cu flansa a unitatii de inchidere si cu scaunul supapa, si din unitatea de deblocare a supapei.

Dispozitivul de baza este echipat cu flansele solicitate conform treptei de presiune (PN16 – PN100). Unitatea de deblocare a supapei pana la presiunea de deblocare PN16, se face in constructie cu membrana, iar peste aceasta presiune in constructie bloc.

Functionarea supapei CITYSTOP CS

Puterea arcului de inchidere (1) prin teaca de inchidere (2) are efect asupra discul de supapa (3) a supapei de siguranta in directia de inchidere. Inchiderea este impiedicata de bratul cu role (4) pana ce, unitatea de deblocare (7) a supapei este inchisa. Daca unitatea de pilot se deblocheaza, bratul cu role (4) se roteste si se misca spre teaca de inchidere respectiv spre discul supapei(3) si supapa se opreste fara influenta externa. Deblocarea se poate face si manual, prin apasarea butonul de deblocare (5).

Pentru deschiderea supapei de siguranta trebuie pozitionat bratul (6) pe partea patrata si trebuie pusa in functiune. Discul supapei (3) prin teaca de inchidere (2) revine in pozitia inchisă. Intre timp la inceputul miscarii se intampla egalizarea presiunii interne.

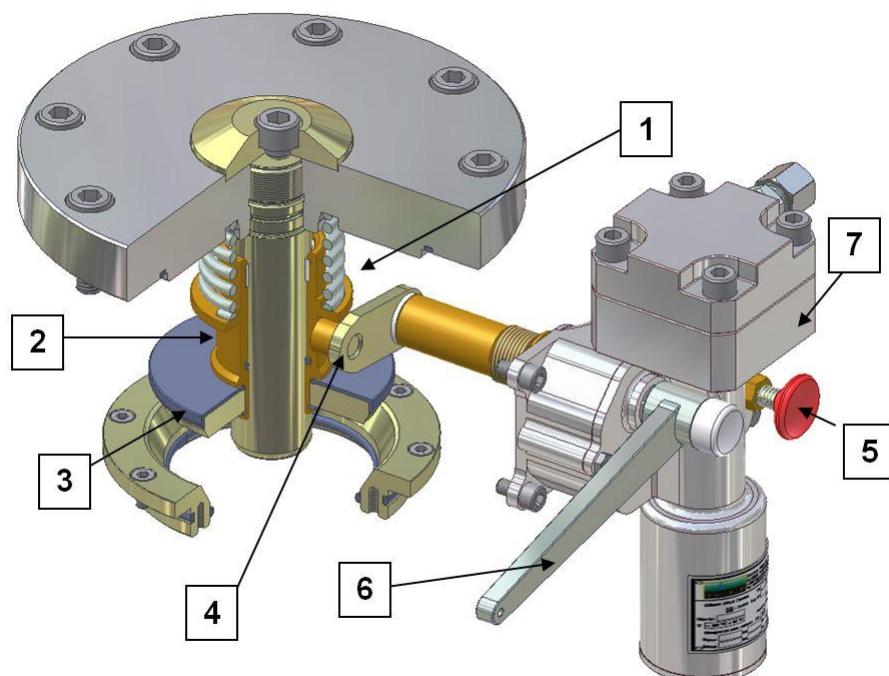

Setup and function

The safety shut-off valve type **CITYSTOP CS** essentially consists of two components: the basic device which includes the flange connections of the closing unit and the valve seat, and the SSV trip. The basic device is fitted with the flanges required for the pressure stage (PN 16 – PN 100). The SSV trip is designed with a diaphragm for trip pressures ≤ PN 16 and as a block for pressures >PN 16.

Function of the CITYSTOP CS

The load of closing spring (1) is applied, via sleeve (2), to valve disk (3) of the safety shut-off valve in the closing direction. A cam lever (4) prevents the valve from closing for as long as the SSV trip (7) is interlocked. Once the SSV trips, cam lever (4) rotates and releases the sleeve and valve disk (3). The SSV closes without the application of any external force. It may be tripped manually by an external pushbutton (5).

The safety shut-off valve is re-opened by applying lever (6) to the rectangular tube. Operating the lever moves the valve disk (3) via sleeve (2) into the original interlocking position. The start of the movement initiates the internal pressure compensation.

Date tehnice

Mediu :	gaz natural, gaze neagresive, gaz natural odorizat, Pb gaz
Presiune de operare max:	16 bar, 40 bar, 100 bar
Gama temperatura:	-20 / (-40) ÷ +60 °C
